Abstract of JP6013633

PURPOSE: To economically manufacture a solar array.

CONSTITUTION: A semiconductor grain 7, having a 1st conductive epidermal part 9 and a 2nd conductive inner part 11, is arranged on an aperture 5 of an aluminum foil 1, so as to be projected from both the sides of a foil 1, and the epidermal part 9 on one side is removed to form an insulating layer 21. Then a part of the inner part 11 and the insulating layer 21 formed on the part are removed, and a 2nd aluminum foil 19 is connected to the removed region 17. The planar region 17 provides a fine ohmic contact with the 2nd aluminum foil 19 as a conductive part.
